**EVALUATION SUBJECT:****ASC STEEL ROOF AND FLOOR DECK****1.0 EVALUATION SCOPE****Compliance with the following code:**

- 2009 *International Building Code*® (IBC)

**Properties evaluated:**

- Structural
- Fire resistance

**2.0 USES**

ASC Steel Roof and Floor Deck is used as roof deck, floor deck and horizontal diaphragms.

**3.0 DESCRIPTION****3.1 General:**

All decks include fluted sections and are cold-formed from steel sheets. Deck types include B, BR, BF, DGB, DGBF, N, NR, NF, DGN, DGNF, 2W, 2WF, DG2W, DG2WF, 3W, 3WF, DG3W, DG3WF, CP-32, CF Deep Deck and Deep Deck Cellular. See the Index to Tables and Figures, following the text of this report, and Figure 1, for the details of each deck type. When the deck flanges or webs are perforated for acoustical effects, sections are referred to as Acustadek™ type. The “F” designation refers to cellular units composed of fluted upper sheets resistance-welded to flat lower sheets.

**3.2 Roof Deck Types B, BR, BF, DGB, DGBF, N, NR, NF, DGN, DGNF:**

Decking is made from galvanized steel conforming to ASTM A653 SS, Grade 40 or ASTM A1003-12 ST40H, or from bare mill finish steel conforming to ASTM A1008-12, SS Grade 40 Type 1 or 2. Decking is available with

optional prime paint. These decks are also available as Acustadek™ type.

**3.3 Floor Deck Types 2W, 2WF, DG2W, DG2WF, 3W, 3WF, DG3W, DG3WF:**

Decking is made from galvanized steel conforming to ASTM A653 SS, Grade 40, or ASTM A1003 ST40H, or from bare mill finish steel conforming to ASTM A1008, SS Grade 40 Type 1 or 2. Decking is available with optional prime paint. These decks are also available as Acustadek™ type.

**3.4 Acustadek™ Perforations:**

**3.4.1 B, BR, DGB, N, NR, DGN and Deep Deck Type Decks:** For web perforated Acustadek™, the holes are centered on each web running the full panel length (see Figure 2 for perforation patterns). For fully perforated B, DGB, N and DGN Acustadek™, the perforations cover the width of the deck section excluding the deck sidelap (see Figure 2 for perforation patterns). The pattern consists of 0.127-inch-diameter (3 mm) holes spaced 0.375 inch (10 mm) on center transverse to the panel length, and 0.325 inch (8 mm) on center (staggered) along the panel length. See Table 2.

**3.4.2 BF, DGBF, NF, DGNF, 2WF, DG2WF, 3WF, DG3WF and Cellular Deep Deck Type Deck:** The perforations are in the flat sheet centered under each top flange running the full panel length (see Figure 2 for perforation patterns). The pattern consists of 0.157-inch-diameter (4 mm) holes spaced 0.433 inch (11 mm) on center transverse to the panel length, and 0.375 inch (10 mm) on center (staggered) along the panel length for the BF, DGBF, NF, DGNF, 2WF, DG2WF, 3WF, and DG3WF. The pattern consists of 0.127-inch-diameter (3 mm) holes spaced 0.375 inch (10 mm) on center transverse to the panel length, and 0.325 inch (8 mm) on center (staggered) along the panel length for the Cellular Deep Deck. See Table 2.

**3.5 Concrete Pan CP-32 Deck:**

No. 18 gage decking is manufactured from ASTM A653 SS Grade 40 or ASTM A1003 ST40H. No. 20, 22, 24 and 26 gage decking is manufactured from ASTM A653 SS Grade 80. Consisting of fluted sections  $1\frac{3}{8}$  inches (35 mm) deep at a pitch of  $4\frac{1}{16}$  inches (116 mm), the decks may be used with or without lightweight insulating concrete fill. If used, the concrete fill must be at least 2 inches (50.8 mm) thick over the top flutes. The lightweight insulating concrete must have a minimum compressive strength of 140 psi (0.96 MPa) when tested in accordance with ASTM C495, and must conform to the following specifications:

- a. Oven-dry weight of 25 to 30 pounds per cubic foot (400 to 480 kg/m<sup>3</sup>).
- b. 1-to-6 ratio by volume of cement to aggregate.
- c. Aggregate must comply as a Group 1 aggregate per ASTM C332. The lightweight aggregate must be tested in accordance with ASTM C495.

Allowable diaphragm shear values may be determined in accordance with this evaluation report.

### 3.6 CF Decks:

No. 18 gage decking is manufactured from ASTM A653 SS Grade 40 or ASTM A1003 ST40H. No. 20, 22, 24 and 26 gage decking is manufactured from ASTM A653 SS Grade 80. CF-1<sup>3</sup>/<sub>8</sub> is identical to CP-32 except that it is installed in the inverted position. See Figure 1.

### 3.7 DeltaGrip™ System:

The DeltaGrip™ shear and flexibility design values only apply to deck bearing the DGB-36, DGBF-36, DGN-24, DGNF-24, DG2W36, DG2WF36, DG3W36 or DG3WF36 identification markings. This system consists of the DeltaGrip™ side seam attachment system installed per Figure 6 on roof deck designated DGB-36, DGBF-36, DGNF-24, or DGN-24 fabricated per Section 3.2, or floor deck without concrete fill designated DG2W36, DG2WF36, DG3W36 or DG3WF36 fabricated per Section 3.3. A DeltaGrip™ seam attachment is comprised of three triangular tabs produced by <sup>3</sup>/<sub>8</sub>-inch-wide (10 mm), 60-degree triangular punches that tightly clinch the side lap standing seam interlock. The allowable diaphragm shear values, factored diaphragm shear values and the flexibility factors with arc spot/seam welds or mechanical fasteners attaching the panels to underlying steel supports are set forth in Tables 7, 10, and 12. The arc spot/seam welds are as noted in General Note 5, and the mechanical fasteners are as noted in the footnotes to Tables 7, 10, and 12.

### 3.8 Deep Deck and Cellular Deep Deck Types 4<sup>1</sup>/<sub>2</sub>, 6 and 7<sup>1</sup>/<sub>2</sub> Inch:

Decking is made from steel conforming to ASTM A653, SS Grade 33. Decking is available with optional prime paint. Decking depths are 4<sup>1</sup>/<sub>2</sub>, 6 and 7<sup>1</sup>/<sub>2</sub> inches (114, 152 and 191 mm), respectively, with a width of 12 inches (305 mm) for Deep Deck or 24 inches (610 mm) for Cellular Deep Deck.

### 3.9 Welding:

For all decking described, welding must use E60 or E70 filler metal. Other weld requirements must comply with AWS D1.3. Allowable tension loads for arc spot welds must be determined in accordance with Section 2205.1 of the IBC.

### 3.10 Resistance Welds:

Where Types BF, DGBF, NF, DGNF, 2WF, DG2WF, 3WF, DG3WF or Cellular Deep decks are used as bare deck, allowable vertical loads must be based on section properties in Table 1A for Types B, DGB, N, DGN, 2W, DG2W, 3W, DG3W or Deep Deck, unless special calculations are provided demonstrating that the resistance welds develop the full section properties of the cellular decks. Resistance welds must be placed in rows parallel to the flutes. See Figure 4 for details.

## 4.0 DESIGN AND INSTALLATION

### 4.1 General:

The section properties and allowable load tables are established using the base-metal thicknesses of the decks noted in Tables 1A thru 1D.

### 4.2 Diaphragm Shear and Flexibility:

A one-third stress increase (or 0.75 reduction of the resulting forces) must not be permitted for Allowable Stress Design for load combinations containing wind or seismic forces for shear values in the diaphragm tables.

Decks are attached to supporting framing members with arc spot welds in the patterns shown in Figure 3.

### 4.3 Diaphragm Design Considerations:

The diaphragm design must include the following considerations:

- a. Diaphragm classification (flexible or rigid) must comply with Section 1602 of the IBC; the diaphragm deflection ( $\Delta$ ) must be calculated using the equation noted in Table 20.
- b. Diaphragm flexibility limitations must comply with Table 20.
- c. Diaphragm deflection limits must comply with Sections 12.10.1 and 12.12.2 of ASCE 7.
- d. Horizontal shears must be distributed in accordance with Section 12.8.4 and 12.9.5 of ASCE 7.

### 4.4 Restrained Fire-resistance Ratings:

CP-32, 2W, 3W, B and N decks may be used in two-hour fire-resistance-rated roof deck assemblies with exposed soffits, provided:

- a. The fill type, thickness and construction are as set forth in Table 720.1(3) of the IBC.
- b. The maximum clear span for CP-32 in No. 26 gage deck is 6 feet, 8 inches (2.032 m), and in heavier gages is up to 8 feet, 6 inches (2.591 m).
- c. The decks are attached to supporting structural elements as set forth in the tables of this report.
- d. No conduits or pipes are embedded in the concrete.

The interior spans of continuous steel-framed construction slabs may be assumed to be restrained for fire-resistance-rated construction. The perimeter spans are assumed unrestrained unless restraint is substantiated by the structural designer and approved by the code official.

Appendix X3 of ASTM E119 or ACI 216.1 may be referenced as guidance on other possible restraint conditions at both exterior spans and discontinuities within fire-resistance-rated constructions, subject to the approval of the code official.

For additional restrained fire-resistance ratings, see Table 19.

### 4.5 Unrestrained Fire-resistance Ratings:

Fire-resistance ratings when fireproofing material is spray-applied to the deck soffit are described in current ICC-ES evaluation reports [ESR-1649](#) and [ESR-1186](#).

### 4.6 Special Inspection:

**4.6.1 Concrete:** Continuous special inspection for concrete and concrete reinforcement must be in accordance with Section 1704.4 of the IBC. The inspector's duties include sampling and testing; and verification of concrete mixes, reinforcement types and placement and concrete placement.

**4.6.2 Jobsite Welding:** Continuous or periodic special inspection for welding must be in accordance with Section 1704.3 of the IBC. Prior to proceeding, the welder must demonstrate his ability to produce the prescribed weld to the special inspector's satisfaction. The inspector's other duties include verification of materials, weld preparation, welding procedures, and welding processes.

#### 4.6.3 Additional Requirements for Installations Under the IBC:

**4.6.3.1 Periodic Special Inspections:** Periodic special inspections in accordance with Section 1706.3 of the IBC are required where the steel deck systems are used as part of the main wind-force-resisting system in structures assigned to Wind Exposure Category B, where the 3-second-gust basic wind speed is 120 miles per hour (52.8 m/sec) or greater, or Wind Exposure Categories C or D, where the 3-second-gust basic wind speed is 110 miles per hour (49 m/sec) or greater. Periodic special inspections in accordance with Section 1707.4 of the IBC are required where the steel deck systems are used as part of a seismic-force-resisting system in structures assigned to Seismic Design Category C, D, E or F. Periodic special inspections apply to connections such as screws, power-actuated fasteners, DeltaGrip™ side seam attachments and button punches. Periodic special inspections also apply where noted in Tables 1704.3 and 1704.4 of the IBC.

**4.6.3.2 Continuous Special Inspections:** Continuous special inspections must be provided where noted in Tables 1704.3 and 1704.4 of the IBC.

**4.6.3.3 Statement of Special Inspections:** A statement of special inspections must be prepared by the registered design professional in charge and submitted to the code official as set forth in Section 1705 of the IBC. The plan must include the special inspection duties noted in Sections 4.6.1 and 4.6.2 of this report.

#### 5.0 CONDITIONS OF USE

The ASC Steel Roof and Floor Deck described in this report complies with, or is a suitable alternative to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

- 5.1 ASC steel deck panels have not been evaluated for use without a roof covering.
- 5.2 Where used as a diaphragm:
  - 5.2.1 A one-third stress increase (or 0.75 reduction of the resulting forces) must not be permitted for Allowable Stress Design for load combinations containing wind or seismic forces for shear values in the diaphragm tables.
  - 5.2.2 Allowable shear values must be limited to values set forth in the accompanying tables for the types of deck involved.

5.2.3 Diaphragm deflections must not exceed the permitted relative deflections of walls between the diaphragm level and the floor below. See Table 20 for diaphragm flexibility and deflection limitations.

- 5.3 Vertical load design of deck without a concrete fill must be based on section properties and web crippling values set forth in this report. Vertical load capacity of concrete-filled, composite deck systems must be as set forth in the tables in this evaluation report.
- 5.4 Special inspection in accordance with Section 4.6 is required for all field-welding.
- 5.5 Fire-resistive ratings are as described in Sections 4.4 and 4.5 or as set forth in Table 720.1(3) of the IBC, provided the fill type, thickness, metal gage and construction are as specified therein.
- 5.6 Calculations and details demonstrating that the loads applied to the decks comply with this report must be submitted to the code official for approval. Calculations and drawings must be prepared, signed, and sealed by a registered design professional where required by the statutes of the jurisdiction in which the project is to be constructed.
- 5.7 Bundles marked in accordance with Section 7.0 of this report provide the material traceability required to conform with the requirements of Table 1704.3, Item 3, of the IBC.
- 5.8 All cellular deck types are fabricated at the West Sacramento, California, facility under a quality program with inspections by ICC-ES.

#### 6.0 EVIDENCE SUBMITTED

- 6.1 Data in accordance with the ICC-ES Acceptance Criteria for Steel Deck Roof and Floor Systems (AC43), dated October 2010.
- 6.2 Reports of fire-resistance tests.

#### 7.0 IDENTIFICATION

Each bundle of ASC steel floor and roof deck panels is identified by labeling bearing the manufacturer's name (ASC Steel Deck); the steel deck panel profile name; the design thickness; the minimum specified yield strength; the manufacturing location (West Sacramento, California, or Fontana, California); the cover width of the panel; and the ICC-ES evaluation report number (ESR-1414).

**General Notes:** The following notes apply to all of the tables in this report unless otherwise noted.

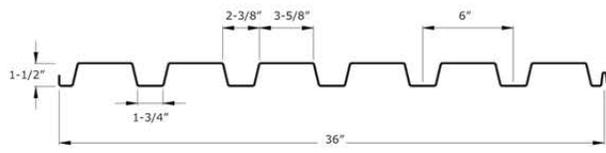

1. The allowable diaphragm shear values listed in the tables are in pounds per linear foot (N/m).
2. The base-metal thickness for all decks is indicated in Tables 1A thru 1D. For decks with specified yield strength of 80,000 psi (551 MPa), yield strength used for design must be 60,000 psi (413 MPa).
3. Deck panel seams must be fastened by welds, button punches or DeltaGrip™ seam attachment, as indicated in the report. The length of seam welds must be a minimum of 1½ inches (38 mm). The DeltaGrip™ seam attachments must be as described in Figure 6. The seam attachment, where required, must be in accordance with the appropriate table, not to exceed 3 feet (914 mm) on center unless noted otherwise.
4. Arc seam or spot (puddle) welds must have an effective fusion area to supporting members at least equivalent to ¾ inch (10 mm) wide by 1 inch (25 mm) long or ½ inch (13 mm) in diameter. DGB and DGBF deck types must be attached to supporting members with welds that have an effective area of ¾ inch (10 mm) wide by 1 inch (25 mm) long in the flutes adjacent to the deck interlock. See Figure 5.
5. Puddle weld patterns are shown in Figure 3 for Types B, BR, BF, DGB, DGBF, N, NR, NF, DGN, DGNF, 2W, 2WF, DG2W, DG2WF, 3W, 3WF, DG3W and DG3WF decks; and Figure 7 for CF 1¾ and CP-32 decks.
6. Spacing of marginal welds to members parallel to flutes must comply with the following, unless otherwise noted:
  - a. Arc seam or spot (puddle) welds to members such as chords and to collector elements such as struts or ties must have a spacing in feet (mm) equal to  $35,000(t)/v$  (For **SI**:  $6,130(t)/v$ ), where:
    - $t$  = Uncoated base-metal thickness of fluted steel deck, in inches (mm).
    - $v$  = Actual diaphragm shear at marginal supports or actual shear transferred to collector, in pounds per foot (N/m).
  - b. Fillet welds to members such as diaphragm chords must have a spacing in feet (mm) equal to  $480 (l_w)/v$  (For **SI**:  $84 (l_w)/v$ ), where:
    - $l_w$  = Length of weld, in inches (mm) [not less than 1½ inches (38 mm)].
    - $v$  = Actual diaphragm shear to be transferred to chords, in pounds per foot (N/m).
  - c. Fillet welds attaching the diaphragms to struts, ties or other collector elements must have a spacing in feet (mm) equal to  $300 (l_w)/v$  (For **SI**:  $52.5 (l_w)/v$ ), where  $v$  is the actual shear to be transferred to the collector element, in pounds per foot (N/m).
  - d. Weld spacing is limited to 3 feet (914.4 mm), maximum.
7. Regarding attachments at interior lines of shear transfer perpendicular to deck corrugations: The shear transfer from a diaphragm to interior tie or strut lines perpendicular to deck corrugations must not exceed the shear values indicated in the tables. Two lines of puddle welds may be used to develop the actual shear transfer to these collector elements.
8. Where individual panels are cut, the partial panel must be fastened in a manner to fully transfer the shears at the point of the diaphragm to the adjacent full panels for the values specified in the tables.
9. The diaphragm shear values, for decks without fill, also apply to the acoustical version of the specific deck, known as Acustadek™. For fully perforated Acustadek™, multiply the allowable or factored shear strength in the tables by 0.85.
10. Deck panel seams may be fastened with self-tapping or self-drilling screws in place of button punches without affecting the tabulated allowable diaphragm shear and flexibility factors under the following conditions:
  - a. Screws are minimum No. 10 size, with a minimum ¾-inch (19 mm) length.
  - b. Screw spacing is no greater than tabulated button-punch spacing.
  - c. The deck material base-metal thickness is minimum No. 22 gage [0.0299 inch (0.737 mm)].
11. The diaphragm shears for cellular deck profiles, identified by the letter "F", are based upon the gage of flat bottom sheet (pan).

For SI: 1 inch = 25.4 mm.

<sup>1</sup>Tabulated values are based on a 1 foot wide section.

<sup>2</sup> Properties based on 40,000 psi yield strength, (Tensile strength = 55,000 psi).

<sup>3</sup>The name "Acustadek™" as suffix to deck type refers to web or pan perforations. See **Section 3.4** for additional details. Section properties for Acustadek™ profiles must be adjusted using the adjustment factors noted in **Table 2**.

<sup>4</sup>BR and NR indicate inverted profiles for which the section moduli are to be reversed.

<sup>5</sup>The first number is the gauge thickness of fluted top sheet. The second number is the gauge or thickness of flat bottom sheet.

For SI: 1 inch = 25.4 mm.

<sup>1</sup>Tabulated values are based on a 1 foot wide section.

<sup>2</sup> Properties based on 40,000 psi yield strength, (Tensile strength = 55,000 psi).

<sup>3</sup>The name "Acustadek™" as suffix to deck type refers to web or pan perforations. See **Section 3.4** for additional details. Section properties for Acustadek™ profiles must be adjusted using the adjustment factors noted in **Table 2**.

<sup>4</sup>The first number is the gauge thickness of fluted top sheet. The second number is the gauge or thickness of flat bottom sheet.

For SI: 1 inch = 25.4 mm.

<sup>1</sup>Tabulated values are based on a 1 foot wide section.

<sup>2</sup>The name "Acustadek™" as suffix to deck type refers to web or pan perforations. See Section 3.4 for additional details. Section properties for Acustadek™ profiles must be adjusted using the adjustment factors noted in Table 2.

<sup>3</sup>The first number is the gauge thickness of fluted top sheet. The second number is the gauge or thickness of flat bottom sheet.

<sup>4</sup>Properties based on 33,000 psi yield. (Tensile strength = 45,000 psi).

For SI: 1 inch = 25.4 mm.

<sup>1</sup>To determine the section properties for acoustical version of one of the deck types listed above, multiply the section properties in Tables 1A thru 1D by the adjustment factor for the deck type.

<sup>2</sup>Adjustment factors apply for all gauges of the deck types listed in Tables 1A thru 1D.

<sup>3</sup>Cellular Deep Deck factors apply for 4 1/2-inch, 6-inch, and 7 1/2-inch versions of the deck type.

For **SI**: 1 inch = 25.4 mm, 1 plf = 14.594 N/m.

<sup>1</sup>For web perforated and fully perforated Acustadek™, the allowable reaction based on web crippling must be multiplied by 0.90.

<sup>2</sup>All values are based on fastened to support and One-Flange Loading or Reaction.

Note: \*Panel buckling is out-of-plane and not local buckling at fasteners

NOTE: ATTACHMENT PATTERNS ABOVE ALSO APPLY TO THE CELLULAR AND NESTIBLE VERSIONS OF THE DECK TYPE NOTED

FIGURE 3 - ATTACHMENT PATTERNS (At Perpendicular Supports)

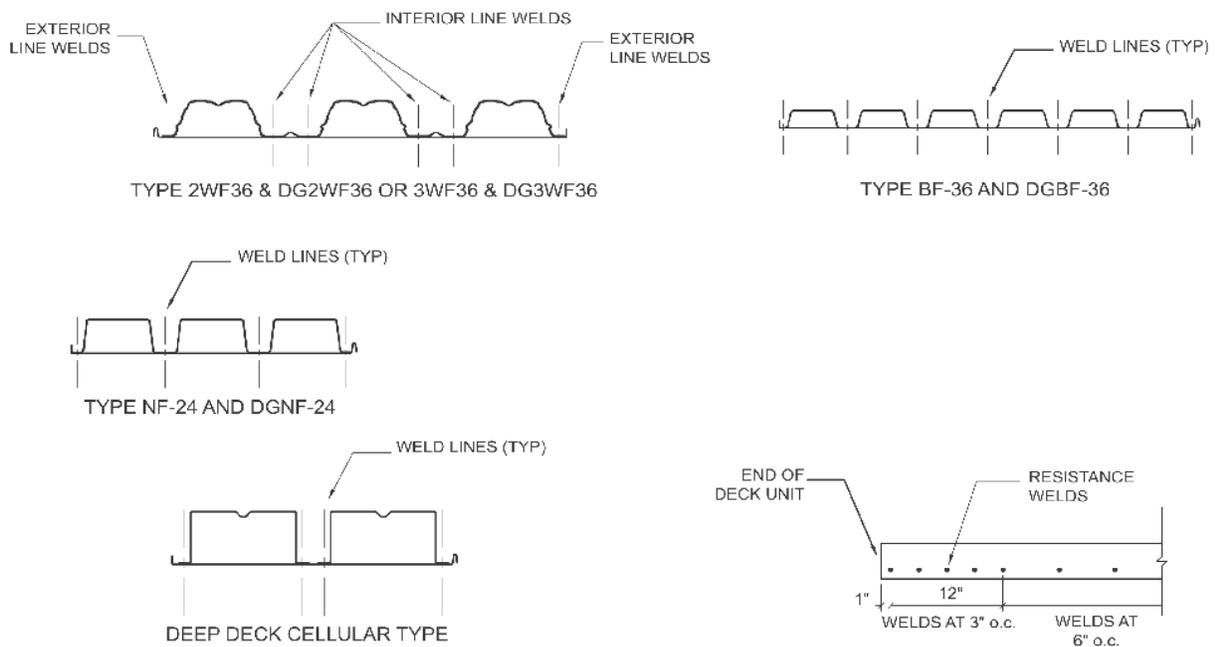

FIGURE 4 - CELLULAR DECK RESISTANCE WELD PATTERNS

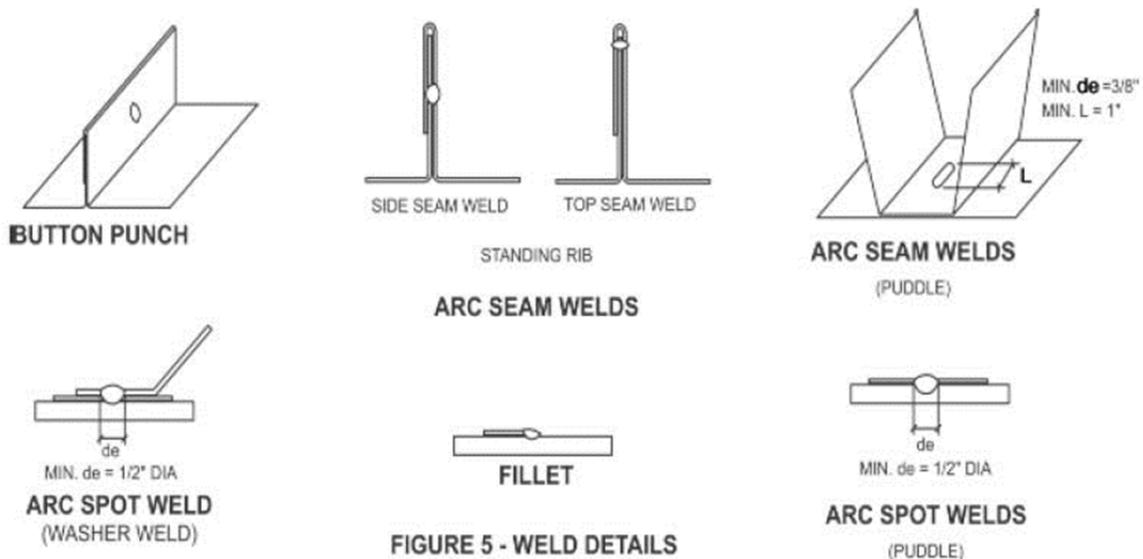

FIGURE 5 - WELD DETAILS

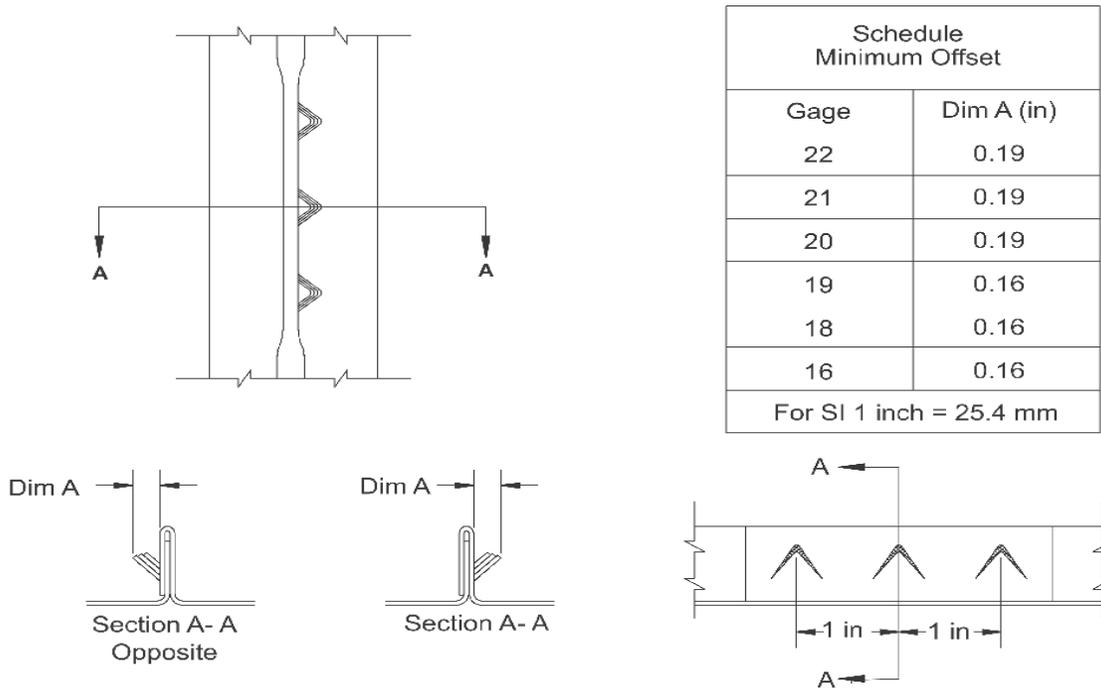

FIGURE 6—DELTAGRIP™ SYSTEM DETAILS

**DELTAGRIP™ SYSTEM NOTES FOR TABLES 7, 10 AND 12:**

- <sup>1</sup>See **Figure 3** for fastener attachment patterns to supports and see **Figure 6** for DeltaGrip™ System details.
- <sup>2</sup>The dimension from the first and last sidelap connection within each span is to be no more than one-half of the specified spacing.
- <sup>3</sup>5/8 inch minimum edge distance for mechanically driven pin and self drilling screws.
- <sup>4</sup>DGB-36 and DGN-24 Deck end lap to be 2 inch nominal +/- 1/2 inch over supports, no end lap required for DG2W-36 and DG3W-36.
- <sup>5</sup>For allowable shears,  $q_a$ , the allowable stress design safety factor for load combinations including earthquake loads of,  $\Omega = 3.0$  with welded connections or  $\Omega = 2.5$  for pins or screws, has been applied to tabulated values. Plate like buckling governs allowable shears above and to the right of the heavy line and a safety factor of,  $\Omega = 2.00$  has been applied.
- <sup>6</sup>For factored shears,  $q_f$ , the resistance factor for load and resistance factor design for load combinations including earthquake loads of,  $\Phi = 0.55$  with welded connections or  $\Phi = 0.65$  for pins or screws has been applied to the tabulated values. Plate like buckling governs allowable shears above and to the right of the heavy line and a resistance factor of  $\Phi = 0.80$  has been applied.
- <sup>7</sup>Allowable shear,  $q_a$ , and factored shear,  $q_f$ , are for diaphragms subject to load combinations that include earthquake loads. Adjustments may be made for load combinations subject to wind loads per AISI S100-07 Section D5 (see **Table 6 of this report**).
- <sup>8</sup>Spacing,  $s$ , of arc spot welds, pins or screws at marginal support members such as chords and to collector elements such as struts or ties must have a spacing adequate to transfer the actual required force to the diaphragm.  $s = q_n/q_{ult}$  where  $s$  is spacing in feet,  $q_{ult}$  is actual required shear in plf,  $q_n$  is nominal shear strength of the weld or fastener in lbs per **Tables 4 & 5**.
- <sup>9</sup> $R$  is the vertical load span of deck units ( $L_v$ ) divided by the length ( $L$ ) of the deck unit  $R=L_v/L$
- <sup>10</sup>Interpolation of shear and flexibility values between adjacent spans is permissible.
- <sup>11</sup>Acceptable mechanically driven pins:

|                                | K66075 pin   |
- <sup>12</sup>Acceptable self drilling screws:
  - ITW Buildex
  - 12-14 I.C.H. Traxx, Traxx, or TEK self drilling screw.
  - 12-24 I.C.H. Traxx, Traxx, or TEK self drilling screw.
- <sup>13</sup>DG2W-36 and DG3W-36 Shear values for pins and screws must be adjusted by factor of 0.8 for Nos 22 and 20 gage, 0.9 for Nos 18 and 16 gage.

For **SI**: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 plf = 14.594 N/m.

<sup>1</sup> $R$  is the vertical load span of deck units ( $L_v$ ) divided by the length ( $L_2$ ) of the deck unit.  $R = L_v/L_2$ .

<sup>2</sup>See **Table 22** of this report for diaphragm flexibility limitations and definition of  $F$ .

<sup>3</sup>Deck end laps to be 2 inches minimum over supports.

<sup>4</sup>See **Figure 3** for support weld patterns.

**TABLE 8—ALLOWABLE DIAPHRAGM SHEARS ( $q_a$ ) (In Pounds per Lineal Foot) AND FLEXIBILITY FACTOR ( $F$ ) FOR B-36 and BF-36 INTERLOCK DECK<sup>1,2,3,4</sup> (Continued)**

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 plf = 14.594 N/m.

<sup>1</sup> $R$  is the vertical load span of deck units ( $L_v$ ) divided by the length ( $L_2$ ) of the deck unit.  $R = L_v/L_2$ .

<sup>2</sup>See Table 22 of this report for diaphragm flexibility limitations and definition of  $F$ .

<sup>3</sup>Deck end laps to be 2 inches minimum over supports.

<sup>4</sup>See Figure 3 for support weld patterns.

**TABLE 9—ALLOWABLE DIAPHRAGM SHEARS (q) (in pounds per foot) AND FLEXIBILITY FACTOR (F) FOR GALVANIZED TYPE B DECK WITH 2 INCHES OF LIGHTWEIGHT INSULATING FILL<sup>1,2,3,4,5</sup>**

| DECK GAGE | NUMBER OF END PUDDLE WELDS |                       |                |                       |
|-----------|----------------------------|-----------------------|----------------|-----------------------|
|           | 5                          |                       | 7              |                       |
|           | Shear (q)                  | Flexibility (F)       | Shear (q)      | Flexibility (F)       |
| 16        | $(5362/L)+272$             | $1277/[(5362/L)+272]$ | $(6767/L)+273$ | $1283/[(6767/L)+273]$ |
| 18        | $(4139/L)+297$             | $1403/[(4139/L)+297]$ | $(5288/L)+301$ | $1419/[(5288/L)+301]$ |
| 20        | $(2786/L)+323$             | $1533/[(2786/L)+323]$ | $(3688/L)+332$ | $1577/[(3688/L)+332]$ |
| 22        | $(2027/L)+331$             | $1570/[(2027/L)+331]$ | $(2784/L)+346$ | $1645/[(2784/L)+346]$ |

For SI: 1 inch = 25.4 mm.

<sup>1</sup>Fill is the same as for the concrete pan (CP-32) deck with a minimum density of 25 pounds per cubic foot. An anchor washer must be installed in each deck unit at diaphragm perimeter supports and at points of shear transfer. The anchor washers shall consist of No. 14 gauge steel angular member, 2 inches high, spaced 2 feet 0 inches on center. The base contains 1/2-inch diameter hole for a 1/2-inch plug weld to beam connection. The anchor bar is notched to support a 3/8-inch diameter continuous reinforcing bar.

<sup>2</sup>Seam attachments: For B-36 deck-button punch at 36 inches o.c.

<sup>3</sup>L = vertical load span of deck unit in feet.

<sup>4</sup>Minimum span L to compute diaphragm shears must be 6 feet 0 inches for all gauges.

<sup>5</sup>Flexibility and span-to-depth ratios of diaphragm are limited by the values given in Table 20.

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 plf = 14.594 N/m.

<sup>1</sup>Minimum yield strength is 38 ksi.

<sup>2</sup>R is the vertical load span (L<sub>v</sub>) of deck units divided by the length (L<sub>2</sub>) of the deck unit. Both units in feet. R = L<sub>v</sub>/L<sub>2</sub>.

<sup>3</sup>See Table 20 for diaphragm flexibility limitations and definition of F.

TABLE 12A—ALLOWABLE DIAPHRAGM SHEARS (qa), (ln plf), FACTORED DIAPHRAGM SHEARS (qf), (ln plf), AND FLEXIBILITY FACTOR (F)

| Gage | Support Fasteners | Seam Spacing (in) | DG2W-36, DG2WF-36, DG3W-36, AND DG3WF-36 INTERLOCK DECK WITH ARC SPOT/SEAM WELDS AND DELTAGRIP™ SIDE SEAM ATTACHMENT (See DeltaGrip™ System Notes) |      |            |      |            |      |            |      |            |      |            |      |            |      |            |      |            |      |           |      |
|------|-------------------|-------------------|--|------|------------|------|------------|------|------------|------|------------|------|------------|------|------------|------|------------|------|------------|------|-----------|------|

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 plf = 14.594 N/m.

<sup>1</sup>R is the vertical load span of deck units ( $L_v$ ) divided by the length ( $L_2$ ) of the deck unit.  $R = L_v/L_2$ .

<sup>2</sup>See Table 20 of this report for diaphragm flexibility limitations and definition of F.

<sup>3</sup>See Figure 3 for support weld patterns.

**TABLE 14—ALLOWABLE DIAPHRAGM SHEARS (q) (in pounds per foot) AND FLEXIBILITY FACTOR (F) FOR 3W36 AND 3WF36 DECK WITHOUT CONCRETE FILL<sup>1,2,3</sup>**

| DECK GAGE | SEAM ATTACHMENTS          | PUDDLE WELDS |   | DECK SPAN (Feet) |             |             |             |             |             |             |

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 plf = 14.594 N/m.

<sup>1</sup>R is the vertical load span of deck units ( $L_v$ ) divided by the length ( $L_2$ ) of the deck unit.  $R = L_v/L_2$ .

<sup>2</sup>See Table 20 of this report for diaphragm flexibility limitations and definition of F.

<sup>3</sup>See Figure 3 for support weld patterns.

For *S*<sub>1</sub>: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 plf = 14.594 N/m.

<sup>1</sup> *R* is the vertical load span of deck units (*L*<sub>v</sub>) divided by the length (*L*<sub>2</sub>) of the deck unit. *R* = *L*<sub>v</sub>/*L*<sub>2</sub>.

<sup>2</sup> See **Table 20** for diaphragm flexibility limitations and definition of *F*.

<sup>3</sup> Decking units are welded to supports at each valley with two arc spot or arc seam welds.

**TABLE 16—ALLOWABLE DIAPHRAGM SHEAR FOR CP-32 DECK WITH 2 INCHES OF INSULATION LIGHTWEIGHT CONCRETE FILL<sup>1,2,3,4,5,6,7,8</sup> WITH AND WITHOUT REINFORCING MESH (in pounds per linear foot)**

For SI: 1 inch = 25.4 mm, 1 plf = 14.594 N/m, 1 psi = 6894 Pa.

<sup>1</sup>The allowable tabulated values are based on decks being filled with a minimum 2-inch depth over the top flange of lightweight insulating concrete having a minimum 28 day ultimate compressive strength of 140 psi. No increases are permitted for seismic or wind forces.

<sup>2</sup>The formulas above the line are for fill without mesh and those below the line are for fill with 2-inch hexagonal wire mesh woven from No. 19 gauge galvanized wire with additional longitudinal No. 16 gage wire spaced 3½ inches on center placed at the approximate center of the concrete.

<sup>3</sup>Spacing of weld washers to members parallel to flutes must be as follows:

- (a) Two feet zero inch on center for diaphragms without anchor bar supports having shear less than 400 pounds per foot.
- (b) One foot zero inch on center for diaphragms without anchor bar supports having shear 400 pounds per foot or greater but less than 950 pounds per foot.
- (c) Eight inches on center for diaphragms with anchor bar supports having shears 950 pounds per foot or greater.
- (d) Diaphragms with 5-2 and 5-3 weld patterns to supports shall be attached at boundaries by alternating weld washers and anchor bar supports at 1 foot intervals.

<sup>4</sup>Flexibility factors for this table shall be assumed to be 5 to 10.

<sup>5</sup>See Table 20 for diaphragm flexibility limitations.

<sup>6</sup>L = Span, in feet, between members supporting vertical loads.

<sup>7</sup>For weld patterns, see Table 17 and Figure 7. The first letter of the attachment indicates welding pattern to exterior supports and the second letter indicates welding pattern to interior supports. Provide No. 3 bars continuous at exterior supports where anchor bar supports are required (Type 5 weld pattern).

<sup>8</sup>Welds are ½-inch effective diameter in lieu of washer welds. Anchor washers are made with 7/16-inch diameter hole for welding.

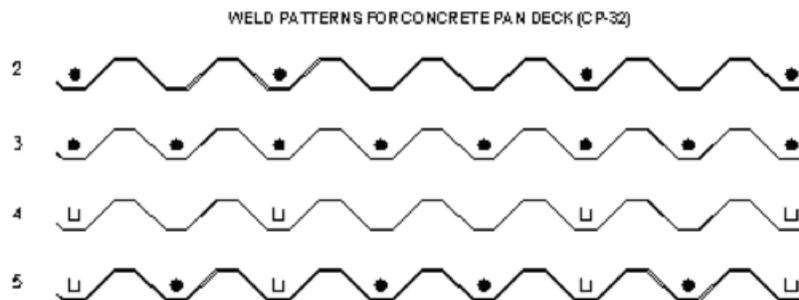

**TABLE 17—CP-32 DECK ATTACHMENT<sup>1,2</sup>**

| CONNECTION TYPE | DESCRIPTION OF 32-INCH WIDE DECK END CONNECTION TO SUPPORTING MEMBERS   |
|-----------------|---|
| 2               | One fastener <sup>1</sup> at each lap and two intermediate fasteners.   |
| 3               | One fastener at each lap and fastener in each remaining corrugation.  |
| 4               | One anchor bar <sup>2</sup> support at each lap and two intermediate anchor bar supports.                             |
| 5               | One anchor bar support at each lap, two intermediate anchor bar supports and fasteners in each remaining corrugation. |

For SI: 1 inch = 25.4 mm.

<sup>1</sup>Fasteners consist of No. 14 gauge sheet washers attached by plug welds to supporting members through a 3/8-inch diameter hole in the washer. (Weld washer may be omitted on No. 18 gauge.)

<sup>2</sup>Anchor bar supports consists of No. 16 gauge steel ear type washers with varying height. The anchor bar support is connected to the deck and supporting member with a plug weld through a 7/16-inch-diameter hole. The anchor bar support is designed to support a No. 3 reinforcing bar running transverse to the direction of the corrugations.

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 plf = 14.594 N/m.

**TABLE 18—ALLOWABLE DIAPHRAGM SHEARS ( $q$ ) AND FLEXIBILITY FACTOR ( $F$ ) FOR INVERTED CP-32, CF 1<sup>3</sup>/<sub>8</sub> INCHES WITH TEK SCREWS<sup>1,2,3,4,5</sup> (Continued)**

**Footnotes to Table:**

$q$  = Allowable shear on diaphragm in pounds per foot.

$F$  = Flexibility factor. The average micro-inches a diaphragm web will deflect in a span of 1 foot under a shear of 1 pound per foot.

$R$  = Ratio of vertical load span of deck,  $L_v$ , to length of each deck panel  $L_2$ .  $R = L_v/L_2$ , both units in feet.

The spacing of screws as to chords, struts, shear transfer elements, parallel to the panel flutes is equal to:

$s = 11,600t/qs$ , where

$t$  = Base metal thickness of deck sheet in inches

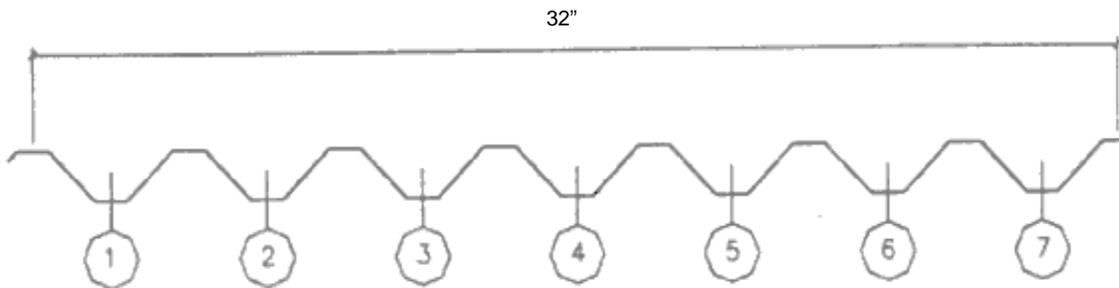

$qs$  = Actual shear on diaphragm in pounds per foot

The equation is also applicable for the spacing of fasteners at overlapping seams in which either adjacent panel is cut to less than 32 inches in width. The number of screws indicated does not include those in the seams at the interior bearings and perimeter supports normal to the flutes required by footnote no. 2 above. Place one screw in each seam and in each flute at all decking interior bearings and perimeter supports normal to the flutes.

Screws must be No. 12-24 Self-drilling for decks to supporting members and No. 12-14 Stitch for deck to deck attachment.

For the four-screw pattern to supporting members place one screw in the first, third, fifth and seventh flutes. For the seven-screw pattern to supporting members place one screw in each flute. For flute numbers see sketch below.

See **Table 20** for diaphragm flexibility limitations

**TABLE 19—FIRE RESISTIVE RATINGS<sup>1,2,3</sup>**

| TYPE OF DECK                                      | CONCRETE TYPE     | CONCRETE THICKNESS                               | RESTRAINED FIRE RESISTIVE RATING |
|---|-------------------|--|----------------------------------|
| CP-32, B-36, BR-36, BF-36, N-24, NR-24, AND NF-24 | See UBC Table 7-C | 2 <sup>1</sup> / <sub>4</sub> inches<br>2 inches | 2 hour<br>1 hour                 |

For **SI**: 1 inch = 25.4 mm, 1 pcf = 16.02 kg/m<sup>3</sup>, 1 psi = 6.895 kPa.

<sup>1</sup>For maximum clear spans, steel requirements, attachments and concrete reinforcing see Section 4.5 of this report.

<sup>2</sup>For reduced concrete thickness, see [ESR-1649](#).

<sup>3</sup>Thickness of concrete above top of deck flute.

| Less than 1   | No limitation                                     | As required for deflection                                     | No limitation               | As required for deflection       | 3 <sup>1</sup> / <sub>2</sub> :1 |

For SI: 1 inch = 25.4 mm, 1 plf = 14.594 N/m, 1 psi = 6894 Pa.

<sup>1</sup>Diaphragms shall be investigated regarding their flexibility and recommended span-depth limitations. Refer to above table for determination of value of F.

<sup>2</sup>Diaphragms supporting masonry or concrete walls must have their deflections limited to the following amount:

$$\Delta_{wall} = \frac{H^2 f_c}{0.01Et}$$

Where:

H = Unsupported height of wall in feet.

t = Thickness of wall in inches.

E = Modulus of elasticity of wall material for deflection determination in pounds per square inch.

f<sub>c</sub> = Allowable compressive strength of wall material in flexure in pounds per square inch. For concrete, f<sub>c</sub> = 0.45f'<sub>c</sub>. For masonry, f<sub>c</sub> = F<sub>b</sub> = 0.33f'<sub>m</sub>.

<sup>3</sup>The total deflection Δ of the diaphragm may be computed from the equation: Δ = Δ<sub>f</sub> + Δ<sub>w</sub>

Where:

Δ<sub>f</sub> = Flexural deflection of the diaphragm determined in the same manner as the deflection of beams.

Δ<sub>w</sub> = The web deflection may be determined by the equation:

$$\Delta_w = \frac{q_{ave} LF}{10^6}$$

Where:

L = Distance in feet between vertical resisting element (such as shear wall) and the point to which the deflection is to be determined.

q<sub>ave</sub> = Average shear in diaphragm in pounds per foot over length L.

F = Flexibility factor: The average microinches a diaphragm web will deflect in a span of 1 foot under a shear of 1 pound per foot.

<sup>4</sup>When applying these limitations to cantilevered diaphragms, the allowable span-depth ratio will be half that shown.

<sup>5</sup>Diaphragm classification (flexible or rigid) and deflection limits must comply with Section 4.4.
